

Weiach Kindergarten

A number of operational and economic considerations led to the decision to build a new kindergarten on the north side of this existing primary school in Weiach. The new building has been constructed from prefabricated timber elements. A child-friendly, soft façade of artificial grass in straw-gold, red-cabbage red and olive-green playfully responds to the colors found in the rural surroundings. The various building components are arranged to create a continuous spatial flow of entrance, cloak room, kindergarten, play corner, and group room. The new spatial arrangement has a wealth of views through the kindergarten rooms.
